Subject: JBL 2226H 2 - way design for a beginner? Posted by Fredrik on Sat, 04 Jun 2005 00:17:12 GMT View Forum Message <> Reply to Message

I have got 2 off 2226H' and want to build a 2 way speaker for my large living room. (600x900cm)What do you reccomend for a beginner with no testing equiptment but with a good ear? Do I need to incorporate an extra super tweeter as well, to end up with a frequenzy range that is not too compromized?I am planning to use a computerized router to cut the cabinets if I can find some good drawings.
