Wayne,Picking up on Andreas' question, approximately where is the -3db down point on the Pro 3? Any reason why you couldn't use the JBL compression tweeter and Eminence horn on top of the cabinet since I understand that interior room is limited in the Pro 3 cabinet? If so would the Pro 3 use the same crossover as the Pro 4? I am guessing that there may be many interested in a top of the line all JBL system in a size a little smaller than the Pro 4s to use with a subwoofer crossed over around 60-80HZ.Larry
