Subject: Pi Fours- Low Frequencies

I was looking at the Eminence data sheets for the 15" speakers, and noticed that they give a lower fs for the Omega series than the Delta Pro(39hz vs. 42hz), and they post a "usable frequency range" that goes down to 35hz for the Omega, and 40hz for the Delta Pro. With that in mind, is it possible to slightly modify a Pi 4 Stage model to ge a little lower frequency response, as I notice the Theatre 4 has that. Is there a tradeoff in the Stage series to get better quality upper bass and/or midrange?
