Subject: Wayne, Does the TAD TD-4001 need top octave compensation?

From the blurb at the Pioneer website, it would seem like it does not:"The TD-4001 successfully achieves all the design objectives we set forth -very high efficiency, wide and perfectly flat response from 600Hz to 20kHz, and low distortion."I'm currently using JBL 2446J's, with T.O.C. built into my passive crossover.I feel a compression driver upgrade coming on soon, and it would beeasier to rationalize the $$$ if I could simplify the crossover.
TAD TD-4001
