>I think the sealed box method is better >for large woofers, and added mass is better >for midwoofers and other speakers with >stiff suspensions. Yea.....Maybe too stiff of suspension is what throws the W.T. I tried the closed box method on it and managed to get a -Vas (I knew they were mind expanding :) The drivers I'm playing with (the kind used in grocery store ceilings) are all hi-Q. Anyways I came up with the below and it matches the W.T. pretty well. Used Futtrups app as a go-between. Thank You again ..... mike  
Quick and Dirty
