Subject: I just ordered Pi Stage 4's, give me some ideas on bracing, and any other construction tips

I will be building the cabinets for my Stage 4's next weekend, so justa few questions. Should I use MDF or ??? What is everyone doing for bracing on these cabinets? Can I change to a round fared port? If I can, what size and how many? Should I build them in mirror image of each other? How high should they be lifted off the floor? I'll be building stands also. Should I mod the kit at all (like change internal wiring, upgrade cross over components or ???)? What type of speaker wire should I use? My runs will be around 8'. Give me all the info you've got, I'm ready to get going on these.Thanks,Justin
