On the pi website there are lists with the dimensions- if you're looking for bookshelf you want Studio one's or Two's. Two's have real bass. If they fit what you need, ask Wayne for the plans, he'll send 'em to you. Besides the shelf idea, you may be able to find someone who can build you some basic boxes for the price of those Dayton cabs. The 10" woofer does things the little full-range speakers just can't do....
