Hello,I am torn between the 2 Pi Towers and possibly the Theater 3 Pi for use with a 300b single ended amp ... but perhaps I should include the Thermonic 3 Pi into the equation also!So would you be so kind as to send me the plans for the Thermonic 3 Pi please.Of the three, which in your opinion is the better choice for a 300b (or possibly 2A3) amplifier in a small room and listened to at a distance of approx 8ft.Are the horns prone to beaming at such close quarters, or do they require more space around them.Many thnaks in advance Wayne,Regardsderek
