If Wayne is listening.....I bought my lovely girlfriend a vintage set of JBL L-150 and their just not cutting it. She loves the sound I get from my vintage JBL L-65. Can you recommend a Pi 3 way that will cover the sound spectrum without needing a sub and won't shake the tiles off her roof? I say my JBL's are vintage....however....I personally know you have been designing speakers long enough to be called "vintage" yourself.
