I've built 2PI Towers and Studio 1 PIs with piezos, and Studio 2 PIswith Vifas. My experience's follow Wayne's descriptions well. The 1sare go just deep enough to be satisfying, but just. The additional extension of the Studio 2s make them better, in my ears, for use as a very nice general purpose speaker. I think you would enjoy the 2sin your HT, and the 1s should be fine for center and surround. I'm using 4 Studio 2 PIs with one 1 PI as a center channel. My room is terrible, so no useful comments there until it is much improved.My comments on the speakers is in 2 Ch use in better rooms.Skip Pack
