Subject: Speaker Question Posted by Andy on Mon, 26 Dec 2005 11:25:29 GMT View Forum Message <> Reply to Message

Hi all!I am currently a Magnepan owner, but would like to build a pair of speakers for use exclusively with an amp I have on hand. (An older Golden Tube SE40) The amp is rated about 40 watts per channel, but I have heard it is realistically around 25 at 8 ohms. This site has been recommended to me and I hope someone can guide me in making the proper choice. I have the ability to do carpentry work and am handy with a soldering iron. I dont have any size restrictions.TIA,Andy
