The thanks to Wayne is long overdue. I purchased a 3PI kit from him over 2 years ago. Even with a mediocre signal, HK receiver, they sound wonderful.The word of warning? Don't hook them up to test the sound until your cabinets are finished. I did before I applied the veneer. Two years later the cabinets are still unfinished and ugly, but sound great! I do have plenty of other speakers available to me. Guess, I will need to get some other PI's before that cabinet project will ever be finished. I see that some design changes have been made to the lines. I'm looking forward to deciding which to go with.Thanks again, Wayne!
