Pay attention to big differences in speakers. Vifa DX-25 (DX25TG0504)Fs=650Hz dB=94 (97/98dB to 10K, 96dB to 20K). Beyma's CP21/F Fs=3500/4000Hz. Very high sensitivity (SPL 1W/1M= >100dB). Very good Super Tw but you have to cut-it around 5to7KHz to make the best of it. Very high inductance Le. Also very expensive. You cannot X-over the CP21/F as if it was the Vifa.
