Subject: Which speaker offers horn bass that doesn't require corners?

Hello, I currently have Stage 4's and love them. I am thinking of adding another set of Pi speakers, and would like horn bass. Unfortunately, I don't have corners to put these in, so they would have to be able to set out in the open. I would drive them with Bottlehead Paramours, and listen to mainly rock and blues, with some electronic and country mixed in. I heard some altec drivers in horn loaded cabinets, and was blown away. The bass was very accurate and tuneful, but didn't overtake the music. What do you think? Thanks, Pfenning
