I'm looking for help with a Pi alignment for following car subwoofer. (I use this alignment with an Altec 515-8g at home and love it but someone else made the calc for me.) Driver: Image Dynamics IDQ10 D2 V.2 Dual voice coil. Will series wire for 3.7 ohms ReFs 23 hz Qes .345 Qms 4.77 Qts .322 Vas 2.26 cu ft Sd 350 cm² SPL 89.4 I would like to use a 2.5" dia port The manufacturer has some recommendations but have no idea what alignments. Thanks!! Jim D.
