Tune the cabinet to 26Hz. The IDQ10 works well in cabinets from 0.5ft<sup>3</sup> to 1.5ft<sup>3</sup> tuned to 26Hz. If you made the cabinet larger than that, you might want to tune lower for an EBS alignment. But in the 0.5-1.5ft<sup>3</sup> range, 26Hz is the best Helmholtz frequency for that woofer.
