Wayne- Although I've retired myself from pro audio sound reinforcement and have no room in our compact condo for a large speaker system, I still enjoy investigating what makes horn-loaded designs tick. I've purchased several BF designs, and downloaded numerous others, for that express purpose. So in that spirit, what is the going price for your 12Pi plans? I can't buy a kit because the "possible furniture" angle failed to work with my wife (WAF = 0 points, or 1/2 point if it's white)!
