Subject: 2344 horn by JBL Posted by spkrman57 on Tue, 31 Oct 2006 17:26:52 GMT View Forum Message <> Reply to Message

Wayne, The 2344 horn is the one used by JBL in their 4430/4435 studio monitors. It is the infamous "Butt-cheeks" horn. Very interesting, I had a pair of 4430 monitors and sold them, but just found a pair of 2344 horns and will look a creating a 4430 clone. They have great dispersion, but don't sound like most other horns. Just to offer some horn info here! Regards, Ron
