All, I was suggested towards your site; which I must say is quite impressive. However, I am wondering what would be suggested for a mid-powered (17w or so..) EL84 tube amp (A version of the DIY ST35...). The Theater 4pi came recommended; any others ? Musically, I listen to a WIDE range of stuff so something all around, perhaps leaning towards the jazz/guitar side of things would be great. The only other consideration would be size. I just cannot have something HUGE; as it is an office after all. The 2pi towers might work though, as long as their footprint isn't too wide.Thanks a bunch, Steve
