Wayne- I have some Q's about your passive x-over(s), if you don't mind.1.) Do you sell them as a separate component?2.) How many variations of your 1.6kHz x-over exist? That is, do you have modifications for different driver options (Eminence, B&C, JBL, etc.)? Here, I'm thinking about your Midhorn/HF combo.3.) Since the HF driver is set forward of the Midhorn driver, how does the x-over compensate for this offset? Here, I'm again thinking about the coaxial variation of mounting an HF horn in the mouth of the Midhorn. (Yup, this mod still appeals to me!)Happy Holidays to all!
