Subject: ultimate home theater speaker for use w/ sub

Hi Wayne,First of all, I'd like to thank you for your efforts, generosity and this site. I built a set of Two Pi Studios about a year ago and have really enjoyed them. They are the main L/R (no center) in my living room home theater crossed at 80hz to my sub. I'm looking to step up to something with even higher efficiency and higher max SPL using the PSD2002...but can't afford the real estate of the other Pi designs. What are your thoughts for a quasi-Three Pi Theater with much smaller deminsions? I only need it to be flat to 80hz. This would be the ultimate HT speaker in my mind...2-way w/ compression horn + large midwoofer, flat from ~80-16k+, 98db+ efficiency, high power handling, yet small enough to be stand/shelf/wall mounted.Thanks in advance.
