Jusr wondering if there is a better tweeter than the Vifa DX25 that I can use - regardless of price. I ask because I am building the Pi One Tower not because of its cost, but mainly because of its size - though I may then move on to the Pi Two Tower. But if there is a better alternative tweeter then I would use it. I appreciate that the Pi One is a "budget" speaker, but thats not my reason for making it. Indeed even if there is a horn that I could use ....PSD2002 ? APT50? but I guess they dont go down low enough???.... anything - I will consider.Many thanks in advance.Derek
