No, I don't stock a 1.2kHz crossover. We have the 1.6kHz crossover in stock though. And to be honest, I would crossover higher than 1.2kHz anyway. The radiating surface area dictates directionality of the midwoofer, and I think it would be better to crossover to a 90x40 horn at 1.6kHz than 1.2kHz. That will give you a better DI match between midwoofer and horn.
