yES. Thanks both of you.I have response curves from the spec sheets that came with the drivers, I also have my friend DUke who sent me his own measurements of the TL-1102. He likes the 1600 crossover point too.So all in all I think this recommendation from Wayne is an excellent one and worth trying. Going to rummage thru my caps and see if I should build or buy.btw.. what are the critical components in the pi two way crossover?would it be worthwhile to put some paper in oils someplace (have an assorment) how about some heavy awq guage inductors (also have some of them or could trade for some).Thanks.
