Hi Wayne,I friend of mine (DIY Forum) is using a 3-way design with a 10"Wo-Vifa P25, a 5"Mid-Seas MCA15 (Fs=51Hz/Fsc=160Hz) and a standard Tw-Seas 27TFF.He has the idea of bringing the xover to the 300Hz region, and I don't know if that is better, or up to the the 600/900/1K region (if voices are in the 90-1000Hz band). Upper filter in the 2K500/3KHz region. Thanks.
