Hi Wayne, I friend of mine (DIY Forum) is using a 3-way design with a 10" Wo-Vifa P25, a 5" Mid-Seas MCA15 ($F_s=51\text{Hz}$ / $F_{sc}=160\text{Hz}$) and a standard Tw-Seas 27TFF. He has the idea of bringing the crossover to the 300Hz region, and I don't know if that is better, or up to the 600/900/1K region (if voices are in the 90-1000Hz band). Upper filter in the 2K500/3KHz region. Thanks.
