A second order 8KHz xover (w/110+ phase on the driver).C = 1.5uF (series)L = 0.47mH (paral.)LPad (without it, it will be to loud)R1= 1.5 Ohms (series) NIR2= 20 Ohms (shunt) Nlor a little less damping (about +1dB)R1= 1.0/0.6/ Ohms NIR2= 20 Ohms NINote: This is assuming that the driver output is linear and sensitivity is the same between speaker drivers.This is not final. Wayne?Good luck!
