I'm currently building two 3 Pi subs, and I think I'm going with the 250 watt plate amp w/ remote control from parts express. However, I do not know if this particular amp has the on/auto-on feature. Personally I hate the auto-on setting. I'm giving up my 1000 watt plate amp for this very reason. There is nothing more annoying than hearing it kick on in the middle of a piece.....C
