Hi There,I have a room 5.2m x 3.9m (17' x 13' approx) which I will be converting to a Home Cinema. After looking at this site I was thinking of the Theater seven Pi with a Theater four Pi for a centre. Would this be to much for this size room. To give a match for the L&R is adding a Midrange a good idea and what is involved (Components and Cost)If this sounds like a good selection then can I get the appropriate plansRegardsWarrick
