Thanks for your reply Wayne,Your help is greatly appreciated.The Stage Seven Pi is 12" shorter which will help in the WAF (Wife approval factor)But you didn't answer my other questions are the measurements just for the bass box or are they the total height to the top of the tweeter.Are the crossovers the same in the Stage and the Professional or will there an upgrade there too ?So for the centre channel then a Stage Four Pi would be recommended ?Would a mid horn upgrade also be recommended to keep the sound even across the sound stage Sorry if I am asking lots of questions but if you know nothing there is only one way to find outRegardsWarrick
