PiAlign suggests a 4.5ft³ (128 liter) cabinet tuned to 24Hz. It will work pretty well in cabinets from 4.0ft³ (113 liter) to 35ft³ (990 liter) tuned to 20Hz - 25Hz. You could also use it on an open or infinite baffle, perhaps mounted to one side of a room's wall, with the rear exposed to the open attic or an adjacent room.
