Hi Wayne,

Just letting you know that for reasons beyond my control, my website address has been changed to:

<http://www.dmcbean.bigblog.com.au>

Also, Hornresp can now model axisymmetric Le Cléac'h flare horns - Version 17.00 refers. The expansion profile is generated using the new improved method documented in Jean-Michel's 2007 spreadsheet. I have assumed a plane wavefront at the throat.

Simply press L when the horn segment 1 length parameter has the focus to select "Lec" for Le Cléac'h flare.

Kind regards,

David
