Hi Wayne, I'm planning to start constructing the 12Pi in a couple of days. Could you please send the latest v2 plans. I also plan on starting on the Fitzmaurice Tuba36 with a single 3015LF driver or a dual 4012HO version for comparison before making multiples. How close do you think they are in terms of max SPL attainable? I'm sure they aren't close in terms of distortion.
