Wayne ... Just starting the Pro 7's. I have two rooms to choose for them. One has corners on 13' wall, but listening distance is limited to max of 10' from speaker. Other room is 12' wide but can't use corners (damn doors) and the 7's would have to go along side walls from 2' to 6' from back wall, only. Good thing is I would have up to 18' to listening position. I always thought a longer distance was better for horns. BTW the rest of speakers are horns. These rooms are adjacent and total volume (+ open kitchen and hallway) is 7000 cu ft.Zene
