Hi Wayne,Need some help with the 12Pi v2 construction.In the motor chamber where panel MC-9 joins panel MC-8 with the acute angle of 67-1/2 degree cut, part of the throat cut-outs on MC-8 are blocked.I believe this is meant to be so. Is there a reason for this?Please clarify this for me so I can proceed with the job.Also, I would appreciate if you could send me the 4 Pi plans.Thanks: Roland
