It's hard for numbers or statistics to tell the truth, but they are excellent for marketing! Many commercial speakers that advertise up to 20khz may not deliver as much hi-freq as the Pi's, the ones that do may sound very "etched". I've thought about putting a little supertweeter on mine a couple times, but don't want to mess with a good thing. If you use the B & C driver, you'll get a little extra clarity up top.
