I am in the process of modding a pair of 70's era klipschorns to improve performance. I am keeping the bass horn, changing the tweeter to a higher-powered unit with a cd horn lens, tri-amping using a processor for xover and time align. Response from the bass horn starts to fall off above 200 hz. I saw an old post on this forum about a kit for a mid-bass horn that looks about right for my application. Is this item still available? If so, what is price for two? Thanks
