A modified "Little Caesar" from [www.triodedick.com](http://www.triodedick.com), which is a mu-foolower for the first stage. Mainly i changed ecc99 with russian 6N6Pi (after few tryng) and use the second section of the double triode as firs stage. A stepped attenuator and an input selector transformed it in a fully integrated amp. Here in one of the firs setup (slightly changed now):
