Subject: low mid tapped horn Posted by iluvaudio on Sat, 26 Apr 2008 18:55:50 GMT View Forum Message <> Reply to Message

Hello, I see that the tapped horn is starting to gain popularity in the pro sound realm and seem to do a great job in the low bass region. I am thinking about using the JBL 2206H for the low mid section playing from 100Hz to 500Hz. Do you think that the tapped horn approach would be effective in this frequency range?
