Hello Wayne, Thought I'd better ask the master here about the crossover network for use in a hybrid 4/7pi mid-horn bass bin. I ordered parts assuming the bass bin followes the crossover of a regular 4pi crossover as shown via the download instructions. Of course though that set up crosses to a compression tweeter. Am I correct to assume that with the mid-horn, it's crossover just kicks in sooner, all things being equal in the universe and pi speakers. Thanks! Rick
