Hi Wayne. I wonder if we can derive L_e (@1kHz) for a driver(?), having all the other T/S parameters for the same driver. I know there is a relation with M_{ms} (and that there is another relation with C_{ms}) but I am not sure if we can get it, or close. I have the measuring tools (from Kirshner/Germany) but I need a new laptop to put them to work, in the long run. I also congratulate you for the help you give, to all of us, on the diyAudio Forums.Thanks
