Hi Wayne, Any chance you could mail me the 4Pi plans? I have 2 pairs of 2226's with four ohm cone kits. I assume i can just scale the inductor values and recalculate the parallel RC values to suit right? I'll use DE250's for one pair but I also have an old pair of EV DH2A's lying around - has anyone got any thought's on crossovers for these? Thanks, John
