I recently purchased a couple of JBL 2226H's and EV DH1A's with HP940 horns, and am looking for guidance with regards to cabinet size, crossover(800Hz or 1.2kHz) and porting. I was referred to this site, "Wayne" specifically, by someone on diyaudio, "Take a look at the Pi speaker site I think Wayne still uses 2226's in the same configuration you want to use them in. Robh3606"  I have seen some of the postings here and look forward to building a pair of, I believe they're called 4's?Your assistance is greatly appreciated.Mark ")
