Hello Wayne, and thank you for replying so quickly.I would appreciate any assistance with regards to building a cabinet to properly load the 2226H(approx. 3 - 4 cubic feet) and a crossover to go with the EV DH1A/HP940 combo(i.e. box dimensions, bracing, horn placement, port size/placement, 1.2kHz crossover etc.). That is a lot to ask for, I know. And, after looking at the Pi speakers and reading reviews about them, I'm sure that I would be happy with something very similar. Is it possible to do this with the drivers I've chosen?Your assistance/guidance would be very much appreciated.Mark BT
