I'm interested in building a set of Pi speakers. I'm curious about the increased performance of the 7pi vs the 4pi. My plans will be to build either 2 7pi's + a 4pi center or 3 4pi's. There will be ample bass reinforcement below the cutoff of 2226 woofers.I guess I'm mainly curious about the advantages of the corner loading and adding the midrange horn.
