I have a few more questions about the 7Pi's.1. Would they do fine placed in the corners of a HT 16' wide and 20' deep? Seating is at 13' and 18' from the front wall. Would they need to be toe'd out at all? Would you change the orientation of just the Mid-Tweet section or the entire speaker?2. Do you suggest treating the front corners above the 7Pi's? If I were using non-cornerloaded speakers I would build corner trap style bass traps from floor to ceiling. Should I make a bass trap that extended from the ceiling to near the top of the 7pi?Could you email me the plans for both the 7pi and 4pi?ThanksMax
