I started collecting all the pieces to build a pair of 4 Pi's a while back. Was just getting ready to start assembling the crossovers and have noticed that the kits are no longer using the JBL 2426h compression driver and supposedly they have a different crossover design. Should I consider selling the JBL's and get some DE250's and build the new crossover design? Do they work better in this speaker or are they just more cost effective? Thanks, Jeff
