Hello,I stumbled upon this thread while researching the Beta 12LTA and had a couple of questions. First, the LF performance seems very good for the size enclosure. Is this still a valid size enclosure for the driver? The LT and LTA both appear to have the same T/S BTW.Second, where would be the best place to position the port. I noticed that the 4PI its up high on the cabinet rather than the traditional spot on the bottom.Thanks, amt
Pi enclosure for Beta 12LTA
