The low point is really more a blend than a crossover. The woofer is rolled off by 250Hz but the midhorn is allowed to go as low as it will go. So there is overlap from about 100Hz up. The mid/tweeter crossover is asymmetrical, on paper it looks like 1.3kHz LP and 1.6kHz HP. Acoustically, the crossover is around 1.4kHz, but I've always called it a 1.6kHz crossover.
