Preliminary impression is very very good!!!! Dynamic, soundstage. Did I say dynamic? Oh yea!I was going to build book shelf speakers but didn't feel like building another pair of stands. So I made them floor standing but really shallow (4.75" deep internal), keeping volume same as the stand mount speakers and stuffing around the woofer with R-13 insulation. The original floor standing design is too big, like a coffin, eh? The S.O. gives thumb down on the coffin and digs the shallow wide floor stander...Value scale is off the chart!!!Will post picture when I have them finished and tweak a bit (may be loading the box with xtra MDF or vinyl tiles???)Thanks, Wayne!!!DucPS: The face plate in one of the tweeters is not aligned (ie the leads should line up with + and -, right?). I tried to fix it but the face plate seems to be glued on. Can I get a replacement?
